This vector contains open reading frames encoding the heavy chain variable region (VH) of the antibody 128.1, an ampicillin resistance gene and a histidine (histidino) selection marker. Transcription of the VH gene is from the VH promoter of the murine 27.44 gene. The vector also includes a heavy chain immunoglobulin enhancer and the human gammal constant region (CH). The VH region of 128.1 was isolated by polymerase chain reaction and cloned into plasmid pAH4274. This was achieved by digesting the plasmid and the product with ECORV and NheI. The VH gene was inserted in-frame with the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The sequences given in AAR41682-85 are encoded by the expression vector,
         In humans, IgG1 may exist as either of two allotypes at site 1, 2 or 17. The inventor's propose eliminating these allotypes by amino acid changes to agree with the sequences of 1gG2, 1gG3 and IgG4. None of the allotype sites (1, 2 and 17) are located within the CH2 domain. New "isoallotypes" should be suitable for therapeutic use in all patients. See AAR27678-R27681.

The invention provides immunoglobulin E (IgE) antagonists comprising one or more of the FeepsilonRI receptor-binding determinant sites of human ligE. The antagonists include IgE variants comprising an immunoglobulin template and binding determinant sequences (bds) CDbds, EFbds and the sequence shown in AAY42581. The CDbds (CD loop binding determinant sequence) are selected from the sequences shown in AAY42567 and the EFbds (EF loop binding determinant sequences are selected from sequences shown in AAY42578-Y42580. The variants are useful in raising and screening anti-IgE antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment and prophylaxis of allergic
gammal CH region CH at the 3' end of the VH-J region by means of a Nhel site. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neuro-pharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological disorders eg. brain tumours, AIDS, stroke, epilepsy, Parkinsons and Alzheimers disease. It may also be used for diagnostic methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Immunoglobulin E variants as peptide antagonists useful for raising and screening anti-immunoglobulin E (IGE) antibodies, in the isolation and purification of FcepsilonRI receptor and in the treatment of allergic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents the human immunoglobulin G1 Fc region, and was used in creating a BZLF2-immunoglobulin Fc fusion protein (BZLF2/FC). BZLF2 is a Epstein-Barr virus (EBV) protein. To create BZLF2/FC, this sequence, the leader sequence of mouse interleukin-7 (IL-7) (see AAR87021), a Flag octapeptide (see AAR87022) and a flexible linker (see AAR87021) are joined to the extracellular domain (residues 34 to 223) of the BZLF2 sequence (see AAR87020). The BZLF2/Fc fusion protein containing this sequence is referred to in claim 4. BZLF2 proteins are members of the C-type lectin family. The C-type lectin domain is found in type II membrane proteins. The BZLF2 protein is capable of binding the beta chain of a major histocompatibility complex (MHC) class II antigen. Fusion proteins with an oligomerising zipper domain (OZD), instead of an immunoglobulin Fc region, can also be created. BZLF2

proteins inhibit antigen-specific antibody formation, proliferation of blood monounclear cells and cytotoxic T cell responses. They also exhibit superantigen-like activity. The proteins can be used for treating or preventing autoimmune diseases such as myasthenia gravis, multiple sclerosis and systemic lupus erythematosus. Also, for treating organ or tissue transplant rejection and for treating or preventing allergy or asthma. They can be used for treating cancer and viral disease, especially EBV infection.
                                                                                                                                                                                                                                                                                                                                                                     Gaps

Epstein-Barr virus protein - binds to major histocompatibility complex class II beta chain, useful for treating, e.g. auto-immune diseases or transplant rejection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence was used in the preparation of a synthetic construct containing the Epstein-barr virus (EBV) BZLF2 protein, which is capable of binding a beta-chain of a major histocompatibility complex (MHC) class II antigen. The protein can be used to inhibit antigen-specific antibody formation, peripheral blood mononuclear cell proliferation and cytotoxic T-cell responses, e.g. in the prevention or treatment of autoimmune diseases, transplant rejection, allergies or asthma,
                                                                                                                                               EBV; BZLF2; beta-chain; major histocompatibility complex; MHC; class II; antigen; prevention; treatment; autoimmune disease; transplant rejection; allergy; asthma; super-antigen; IgGl; Epstein-barr virus; human; immunoglobulin Gl; Fc fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The human IgG1 Fc region (AAW02305) can be used as a fusion partner for interleukin-17 receptor (IL-17R) proteins (see also AAW04184-85), allowing purification of recombinant IL-17R using protein A or protein G affinity chromatography. Fusions between Fc and HYS13 (see also AAW02387), a viral homologue of IL-17, and between Fc and murine CTLA8 (AAW02386) were used to identify cells that express the murine IL-17R. Selected murine thymoma EL4 cells were used as a source of murine IL-17R CDNA (AAT33800).

                                                                                                                                                                                                                                                                                          The present sequence represents a protein used to create fusion proteins with the Epstein-Barr virus BZLF2 proteins of the invention. The BZLF2 protein is capable of binding to a beta chain of a class II major histocompatibility complex antigen to inhibit an antigen-specific response. BZLF2 is useful for inhibiting antigen-specific antibody and cytoxoic T cell responses. BZLF2 is also useful for inhibiting undestrable antigen specific responses, e.g. in the treatment or prevention of asthma; for preventing or treating autoimmune disease; and for preventing tissue or organ transplant rejection.

This sequence represents a human IgG1 Fc fragment which is used in the construction of a fusion protein with human interleukin-17 receptor (IL-17R). IL-17R polypeptides have immunoregulatory activity. They can be used for inhibiting T cell proliferation, or for inhibiting T cell activation. In particular they can be used for preventing or treating organ or graft rejection, autoimmune disease, allergy or asthma. They can also be used for the prevention or treatment of inflammatory disease in which activated T cells play a role or for inhibiting B cell poliferation or immunogalbullan secretion. The IL-17 polypeptides can also be used as immunogens, reagents in in vitro assays, or as binding agents for affinity purification procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to a novel receptor that binds Interleukin [27] [11-17, also known as CTLA-8] and a Herpesvirus saimiri homolog, HVS13. The receptor is a type I transmembrane protein which is referred to as IL-17R. Murine thymona El4 cells were found to express a receptor for IL-17. An EL4 mammalian expression library was screened and cDNA encoding the receptor was identified (see AAA6L238). The CDNA was used to isolate DNA encoding human IL-17R by cross species hybridisation. The human IL-17R cDNA and protein are described in that may be used with IL-17R cDNA and protein. Soluble forms of the receptor may be used to regulate immune responses, for example to support and accomponents of organ grafts. Antibodies to IL-17R consisting of amino acids 1-322 of murine IL-17R or 1-320 of human IL-17R may be used used in affinity purification of the receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IL-17R; interleukin-17 receptor; soluble; CTLA-8; Herpesvirus saimiri;

coby library from T cell thymoma EL4 cells, which were identified as coby library from T cell thymoma EL4 cells, which were identified as binding fusion proteins comprising human immunoglobulin G1 (19G1) Fc region and soluble LL-17 (CTLA-8) protein or a homologous Herpesvirus salmiri (HSV) protein, designated HSV13. Suppressing rejection of a grafted syngemeic or allogeneic organ or tissue in a graft recipient involves transfecting the organ or tissue to be transplanted with DNA encoding soluble IL-17R, so that expression of IL-17R by the current comprise residues 1-322 of the murine IL-17R, residues IL-17R fragments comprise residues 1-322 of the murine IL-17R, residues that bind IL-17. The method is useful for regulating an immunoresponse, for suppressing rejection of grafted organs or tissues in the recipient contributing diseases like allergy, asthma and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 IL-17R; interleukin-17 receptor; soluble; CTLA-8; Herpesvirus saimiri; HSV13; graft rejection; suppressor; immunosuppressive; anti-allergic; anti-asthmatic; immunoglobulin G1; Fc region.

                                                                                                                                                                                                                                                                                          ö
                                                                                                A novel interleukin-17 receptor (IL-17R) was identified by screening a binding fusion proteins comprising human immunospiobulin (1 (1961) FC region and soluble IL-17 (CTLA-8) protein or a homologous Herpesvirus saimiri (HSV) protein, designated HSV13. Regulating an Hamunos or inflammatory response in a mammal comprises administering soluble IL-17R. Soluble IL-17R fragments comprise residues 1-320 of the murine IL-17R, and fragments comprise residues 1-320 of the an immunoresponse, for treating or preventing diseases like allergy, asthma and autoimmune diseases, and for suppressing rejection of grafted organs or tissues in the recipient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Interleukin-17 receptor; IL-17R; CTLA8; antiinflammatory; antiallergic; immunosuppressive; organ rejection; graft rejection; autoimmune disease; allergy; asthma; IgG1; immunoglobulin G1; human.

This invention relates to an isolated and purified interleukin-17 receptor (IL-17R). A soluble IL-17 protein (CTLAB) and a herpesvirus similar (HVS13) open reading frame (homologous to CTLAB) were expressed as fusion proteins comprising an immunoglobulin Fc region, and used to screen for the expression of the IL-17R. The screening identified the novel receptor of the invention. IL-17R is a type I transmembrane protein that exhibits antiinflammatory, immunosuppressive, antiasthmatic and antiallergic activities, and is an inhibitor of rell proliferation and activation. IL-17R can be used to regulate immune functions, and is useful for preventing or treating organ or graff rejection, autoimmune disease, allergy or asthma. The present sequence represents the Fc region of human immunoglobulin GI (19G1). This fragment of IgG1 forms part of the IL-17 fusion protein used to identify IL-17R.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention is directed towards assays for detection of interleukin-17 (\rm IL-17), \rm IL-17 receptor (\rm IL-17R), and (antagonists or mimetics of) the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New assay kits for detecting interleukin-17 (IL-17), IL-17 receptors and (antagonists or mimetics of) the interaction between IL-17 and IL-17 receptor, useful for treating autoimmune diseases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 APPVAGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKFNWYVDGVEVHNAKTK 60

The invention relates to Interleukin-17 receptors (IL-17R).

Interleukin-17 and their corresponding nucleic acid molecules. IL-17R is 4.7Ppe I transmembrane protein which is used for regulating the immune response. The invention is useful for suppressing rejection of a grafted organ or tissue in a graft recipient. Soluble IL-17 (CTLA-8) receptors are useful for preventing or treating organ or graft rejection,
interaction between IL-17 and IL-17R. The assay kit comprises an IL-17R protein and a detecting reagent. The method is useful for inhibiting binding of IL-17 to cells expressing IL-17R. IL-17 receptors are also useful for preventing or treating organ or graft rejection, autoimmune diseases, allergy, asthma and inflammatory diseases in which activated T-cells play an important role. The present sequence represents For a property of human immunoglobulin IgG1, used for constructing a murine

A Molecule type: DNA

A Residues: 1-37 < FELLS

A Note: the sequence was determined from the germline gene

A; Title: Human immunoglobulin sublclasses. Partial amino acid sequence of the constant

A; Reference number: A90249; MUID:70207560
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A.Map position: 14932.33-14932.33
A.Introns: 99/1; 111/1; 221/1
C.Complex: An immunoglobulin heterotetramer subunit consists of two identical light (k hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into C.Superfamily: immunoglobulin c region; immunoglobulin homology
C.Keywords: duplication: glycoprotein; heterotetramer; immunoglobulin
F;20-85/Domain: immunoglobulin homology <IM1>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ig gamma-4 chain C region - human

```
A. Molecule type: protein
A. Residues: 1-289 <FRA>
A. Nestein the molecule is a dimer linked by 12 disulfide bonds; it has an extra interch
A. Note: the sequence of residues 42-76 was taken from the reference that follows
A. Note: the sequence of residues 42-76 was taken from the reference that follows
B. Michaelsen, T. E.; Frandione, B.; Franklin, E.C.
J. Biol. Chem. 252, 883-889, 1977
A. Title: Primary structure of the 'hinge' region of human IgG3. Probable quadruplicat
A. Reference number: A92219; MUID:77118561
A. Contents: normal gamma-3 chains, sequence corresponding to residues 12-97 of protei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A; Molecule type: protein
A; Residues: 12-97 <MIC>
A; Note: the hinge region in gamma-3 chains is about four times as long as in other ga
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Alote: cysteines at positions 24, 27, 33, 39, 42, 48, 54, 57, 63, 69, and 72 form in Riwolfenstein-Todel, C.; Franglone, B.; Prelli, F.; Franklin, E.C. Biophys. Res. Commun. 71, 907-914, 1976

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A. Wote: this protein lacks most of the V region, all of the CH1 region, and part of the N. Alexander. A.; Steinmetz, M.; Barritault, D.; Frangione, B.; Franklin, E.C.; Hood, Proc. Natl. Acad. Sci. U.S.A. 79, 3260-3264, 1982
A.Title: gamma heavy chain disease in man: CDNA sequence supports partial gene deleti A; Reference number: A93915; MUID:82247835
A. Contents: heavy chain disease protein Omm
A. Accession: A93915
A. Molecule type: mRNA
A. Residues: 12-70;72-114;116-125, 'E', 127-133, 'L', 135-136, 'E', 138, 'Y', 140-154, 'D', 156-18, Note: a carboxyl-terminal Lys is removed posttranslationally
A. Note: this sequence may represent an allelic form or another gamma chain subclass
C. Commont: The heavy chain disease protein Wis is shown.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               F;203-270/Pomain: immunoglobulin homology <IMM>
